

Brockholes Wind Turbine Bases

Client: Private Client

Main Description

This project involved the construction of 3 wind turbine bases and associated electrical ducting installation.

Works Included:

- Construction of access roads and parking area.
- Site Clearance works.
- Earthworks and construction of wind turbine foundations.
- Installation of all service ducts.
- Installation of all concrete reinforcement steel.
- Installation of a foundation basket for turbine tower.
- Installation of earthing and lightning protection system.
- Pouring of all concrete associated with construction.
- Reinstatement of all work areas around the bases.

Close co-operation was maintained for the duration of the project with local landowners and the client. As the NRS Group had not previously worked in the geographical area, prior to works commencing, the NRS Group approved contractor list was updated. Local suppliers were employed where possible. We also improved our company processes in relation to running the construction of bases simultaneously.
