

Upper Haywood Wind Turbine Civil Works

Client: Phenix Renewable Energy
Form of Contract: General Purchasing Terms and Conditions

Main Description

This project involved the construction of a wind turbine base, including improvements to an approach road junction. Works included:

- Provision of a temporary access track and temporary works.
- Excavation of materials for a new turbine base.
- Installation of all steel reinforcement
- Installation of lightening protection.
- Installation of anchor bolts.
- Construction of a crane hardstanding.
- Pouring of concrete to form the base.
- Construction of a substation and transformer plinth.
- Excavation of a 700 meter long service track and backfilling to specification once cabling was in position.
